Company Description

Storware is a company building the simplified data protection products for businesses. We help to reduce the risks of data loss and its related cost. Wherever you keep your data- in the cloud, on servers or endpoints- we continuously care and bring additional value to them. Storware successfully offers products through the worldwide distribution and partner channel. The Company was set up in 2013 in Warsaw, Poland.

Product Profile

Storware vProtect is an enterprise backup solution for virtual environments. It facilitates the implementation of virtual machine backup running on RHV (RHEV), KVM, oVirt and more. By using hot-clone feature one is now able to quickly push VM's backup to vProtect Server. Dynamic reconfigurations are available directly from the web interface.

Overview

vProtect is made to backup virtual machines running on Open platforms in a simplified way.

Executive Summary

As a reply to rising need of providing virtualization and containerization, vProtect introduces robust and cost effective data protection for RHV. The product is designed to solve the problem of having multiple virtualization platforms and connecting them to an existing backup provider in the company. vProtect has proven in a wide variety of use cases over time, including on-premises enterprise virtualization, private cloud (such as OpenStack), hyperconverged and cloud (integration with Red Hat CloudForms). Integration is key to creating an end-to-end solution. Thanks to the open API vProtect and Red Hat can benefit from the deep integration offering reliable and fast backup to complete vendor's solution.

Statement from Partner

"Today enterprises running Containers and Red Hat Virtualization need to face a Business Continuity challenge by defining specific Service Level Agreements for their infrastructure. vProtect delivers robust, affordable and enterprise-grade VM backup & recovery. With fully commitment and integration via REST API with core Red Hat technologies such as RHV, CloudForms, RHII, Storware provides a storage management platform that allows IT and business to improve company data resiliency." - Paweł Mączka, Chief Technology Officer, Storware

Statement from Red Hat Connect

"As customers are looking to migrate their applications to the cloud taking advantage of new and better services, the container evolution is gaining momentum," said Mike Werner, Senior Director, Global Technology Partners, Red Hat. *"And, Red Hat certification combined with cutting edge partner products delivers a supportable and performant platform for the future present and future customer deployment models. Red Hat is thrilled to work with our software partners resulting in the world's largest commercial ecosystem for containers."*

TECHNOLOGY PARTNER

CERTIFIED TECHNOLOGY

Product Benefits

- **Reduce TCO, simplified data protection for VM infrastructure**
Simple and fair licensing (based on number of physical sockets). vProtect was designed to have its own way to protect VM's – simpler and faster than others.
- **Backup destination - Freedom of choice**
Be independent or add Storware to existing backup infrastructure. Customers can choose a preferred path for their backup destination, private, public (AWS S3, OS SWIFT) or hybrid clouds. In addition vProtect can integrate IBM Spectrum Protect, Dell EMC NetWorker, Veritas NetBackup.
- **REST API to simplified integration**
vProtect provides fully documented RESTful API, where customers, partners without any pain hide or orchestrate engine via 3rd party solutions.

Use Cases

Storware vProtect is choice for administrators having multiple open virtualization platforms that want to store VM backups in their present backup providers without any significant changes. vProtect can also work easily as a stand-alone solution from 1-2 hypervisors up to environments with hundreds of VMs without spending hours for learning yet another backup software. What else?

- Simplified Data Protection for your existing RHV, oVirt hypervisors
- vProtect KVM hypervisor Free Edition – anybody who use native stand alone KVM can take advantage of use vProtect Free Edition Version
- Flexible integration with Red Hat CloudForms enables businesses to backup as a service approach either on private, hybrid or public cloud
- Storware completes Red Hat Hyperconverged Infrastructure (RHAI) with a single data management platform, by adding a value of data protection, disaster recovery, replication capabilities.

Check out how simple setting up the protection of your VM's can be.
