

for CLOUD

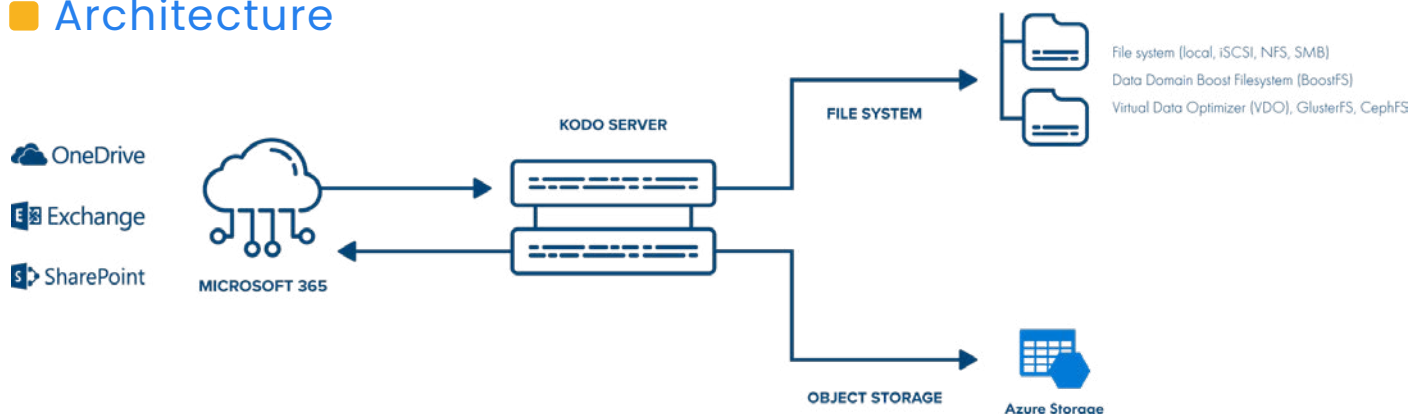

4.2 MOSAIC

## Microsoft Office 365 backup and recovery solution

KODO for Cloud 4.2 is the major release with native Microsoft Azure Blob Storage support, which provides unlimited storage scalability for Microsoft 365 backups. But that's not all. The new setup assistant will guide you through the process of creating the AzureAD application in your Microsoft 365 tenant. The assistant improves the workflow, and you can start protecting your organization within minutes.

### Architecture

### Summary

KODO solution for Office 365 ensures not only continued protection of key corporate data, but also compression, deduplication, and file versioning. Thanks to its scalable architecture and RESTful API, you get a complete and modern tool that ensures business continuity.

KODO will protect your critical data from loss due to ransomware, malware, or other threats or just simple user mistakes. With KODO you get the whole package of necessary tools to reach the highest performance and safety requirements of your business data workflow.

### Changes:

- **New:** New Backup Destination – Azure Blob Storage
- **New:** Azure AD application setup assistant
- **New:** Exchange Online mailbox archives backup and restore
- **Improved:** UI – new and redesigned features and functionalities to make your work more effective.
