

## complete backup and recovery solution for Microsoft Office 365

KODO for Cloud 4.3 is the major release with Microsoft Teams backup and recovery support. What's more, from the UX perspective, it's straightforward to search and restore necessary data quickly. To be more precise, the entire team and specific channels, or locally download messages history.

In KODO 4.3, we also added the ability to control CloudAgent configuration directly from the administrative panel. Last but not least, we recorded a significant performance boost due to code optimization.

### Architecture

### Summary

KODO solution for Office 365 ensures continued protection of critical corporate data and compression, deduplication, and file versioning. Thanks to its scalable architecture and RESTful API, you get a complete and modern tool that ensures business continuity.

KODO will protect your critical data from loss due to ransomware, malware, other threats, or just simple user mistakes. With KODO, you get the whole package of necessary tools to reach the highest performance and safety requirements of your
