

Storware Cloud

Simplified, Scalable, and Cost-Optimized Backup Storage as a Service

Storware Cloud is a new **Storage as a Service (STaaS)** backup destination designed to streamline data protection while reducing costs. This flexible offering provides a tiered approach to cloud storage, enabling you to choose the optimal balance between performance and cost-effectiveness.

Primarily designed as a secondary backup destination, Storware Cloud makes it easy to implement a comprehensive **3-2-1 backup strategy** across your entire infrastructure. You maintain full control over key decisions: selecting your preferred geolocation for data storage, choosing between ultra-fast access capabilities, advanced deduplication features, long-term archiving options, or robust immutability protections.

For organizations using **Storware Backup Appliances**, Storware Cloud serves as the ideal backup storage solution – fully compatible and ready for immediate deployment.

Why Storware Cloud?

- **Simplified Management:** Eliminate the complexity of managing your own cloud storage infrastructure. Storware Cloud handles the backend, so you can focus on protecting your data.
- **Significant Cost Savings:** The tiered storage model allows you to optimize your spending by selecting the right level of performance for your specific needs, ensuring you only pay for what you use.
- **Flexible Tiers:** Choose from three distinct tiers, each powered by an industry leader, to match your backup strategy:
 - **Tier 1 powered by N-able:** Ideal for high-performance and frequently accessed data.
 - **Tier 2 powered by Vawlt:** A balanced option for a mix of active and archive data.
 - **Tier 3 powered by Seagate:** Best suited for long-term retention and archival purposes.
- **Seamless Integration:** Storware Cloud can serve as a primary or an additional backup destination for your existing Storware Backup Appliance (SBA), including the new SBA 1010 model. This allows for a hybrid approach, combining on-premises and cloud backup to enhance your data protection strategy.

Key Features

- **Tiered Storage Options:** Match your data needs with the right storage class.
- **Scalable by Design:** Grow seamlessly as your storage demands increase.
- **Built-In Reliability:** Powered by leading providers (N-able, Vawlt, Seagate).
- **Data Protection Tools:** Deduplication, archiving, geolocation choice, and immutability.
- **Seamless Integration:** Works out of the box with Storware Backup Appliance.

Storware Cloud

Simplified, Scalable, and Cost-Optimized Backup Storage as a Service

Secure. Scalable. Cost-Effective.

With Storware Cloud, protecting your data has never been easier. Experience the simplicity of a **tiered, cloud-based backup solution** that grows with your business – and ensures your data is safe, accessible, and cost-optimized.

Start simplifying your backup today with Storware Cloud.
